

18CSE353T - PATTERN RECOGNITION TECHNIQUES

PRACTICE EXERCISE-1

Consider all the Alphabets [A,B,.....Z] as Uppercase

As given in Example below for Character 'A' , build the feature vector for all Alphabets

1. Statistical PR – Feature Extraction and Representation using characteristics as given
2. Structural PR – Feature Extraction and Representation using notations/symbols

A = [3,2,1,2,1] B=[6,0,3,0,2] C=[.....]

You can build Feature vector as Array, Linked List, List/Dictionary in Python or any other Data structure

For Ex. In Python:

As List $A = [3,2,1,2,1]$ for Statistical PR

As Dictionary `alphabet = { 'A' : '1', 'B' : '2', 'C' : '3', }`

A = [1,2,3,1,2] for structural PR ,

As List $A = ["SlantingUp1" , "SlantingUp2" , "Horizontal" , "SlantingUp1" , "SlantingUp2"]$ for Structural PR

Note: You can use 'C' , Python, Java, or any language to implement the above.

Submit the code in GCR
